

Phase 8 / task 8.6 (D3): re-anchoring DeepScience off CDKN1A

(a) After removing depth the two caller-free anchors agree with each other in 11/11 sections and with the published CDKN1A anchor in 10/11. The exception is 7250.

▼ = 7248 and 7435, where the published anchor itself goes negative once depth is removed

(b) Re-anchoring halves the circularity; the magnitude call keeps the Tier A signal
