

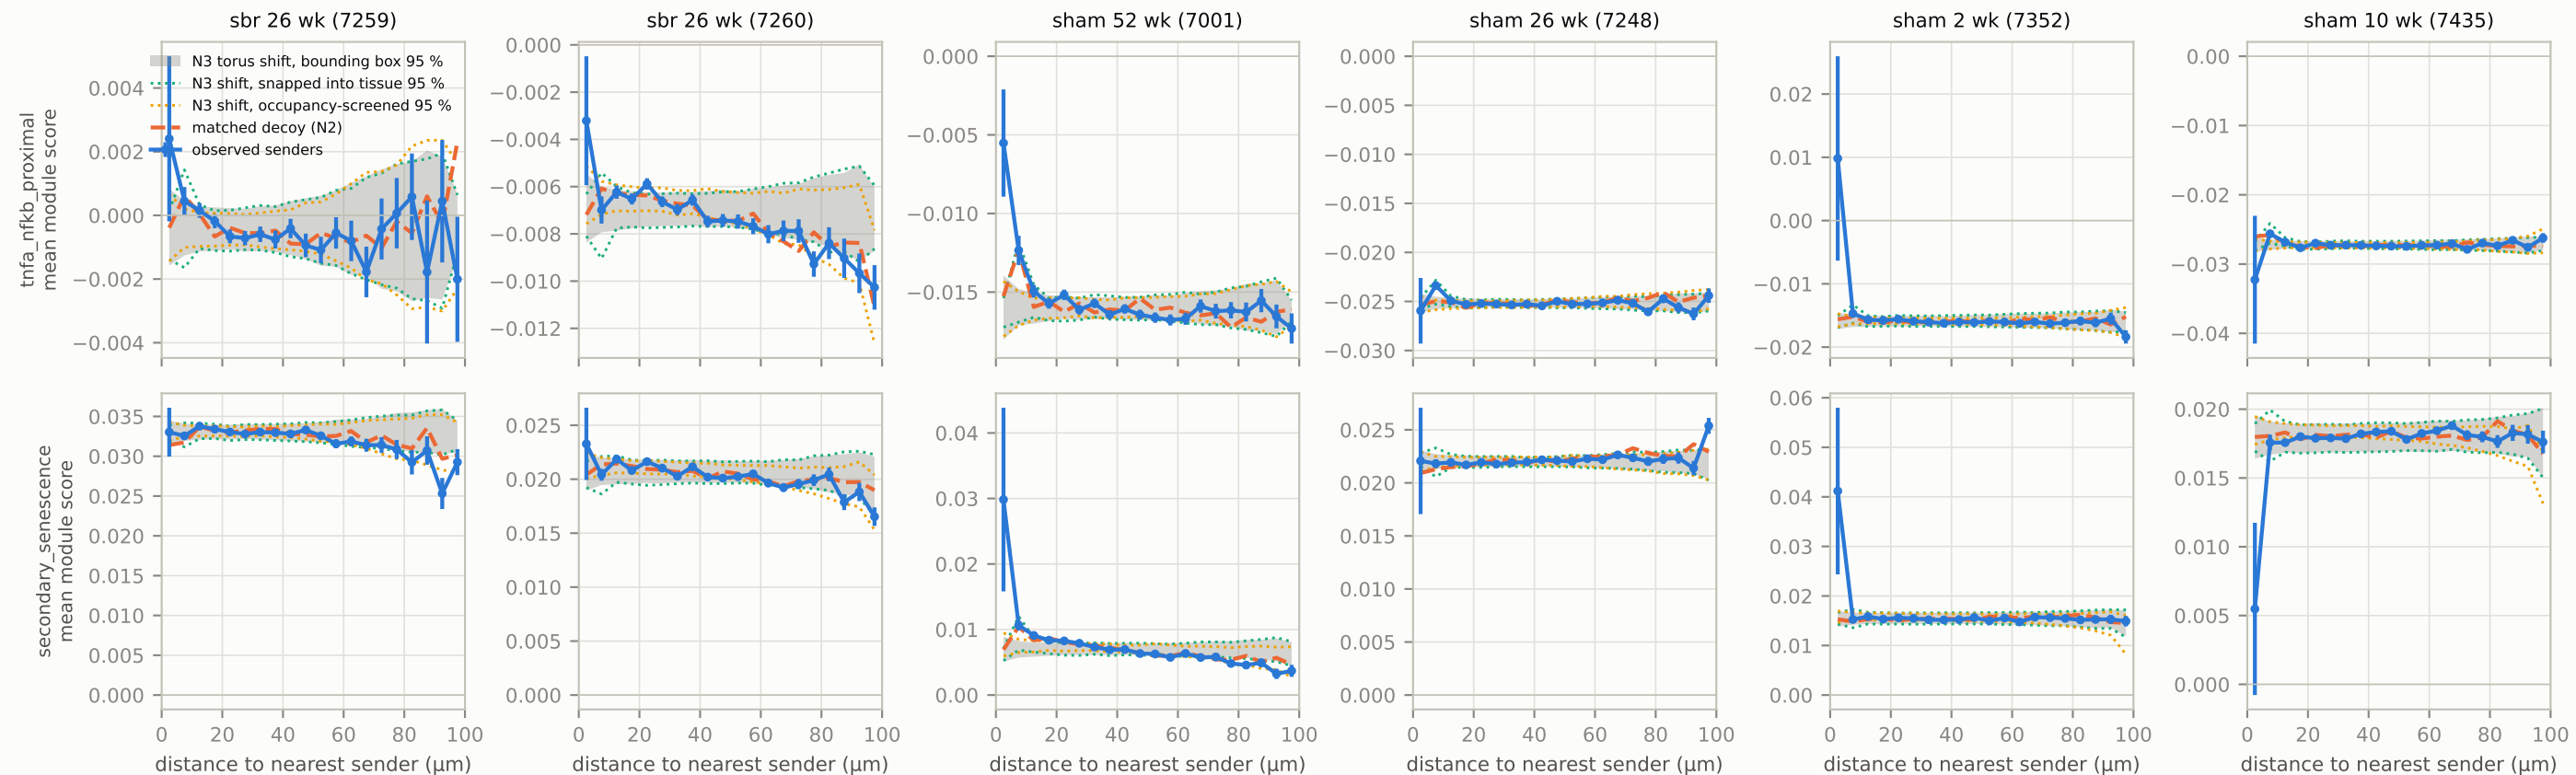

Figure 2b — the naive gradient, the matched-decoy curve and the torus-shift null band, bounding-box and in-tissue (correction C1)
Hepatocytes, six Test-3-admissible sections, sender call tierA_p95, 5 μ m bins to 100 μ m

The frozen PRIMARY null (N3-var / N4-var, variance-corrected) has NO band here: perm_curves*.csv contains no variance-corrected draws, so no per-bin interval for it exists in the repository. Its surviving fraction is in figure 2c (N3-var 0.996, N4-var 0.985).
